

Alien Autopsy

- Make the jello– this mold uses approx. 4 cups– it's best to use less water than suggested in the recipe. That will make the jello more firm.
- Spray the mold with Pam
- Pour about an inch of jello into the mold and place some items
- Refrigerate for 2 hours and do another layer using almost all of the jello. Add more items.
- Refrigerate 2 hours and then pour the remaining jello.
- Refrigerate approx. 6 hours
- Gently pull at the edges of the jello in the mold to break the seal, then invert on a platter
- Dissect at your leisure– use the autopsy forms for added fun
